# AutoCAD LT 2017 Scaricare Generatore Di Chiavi 64 Bits Italiano

Screenshots References Category:2001 software Category:Freeware Category:Windows-only software Category:Graphics software Category:Windows multimedia softwareIntroduction The Python LANG environment variable can be used to determine the language version of the Python interpreter by its response to the LANG= command. The value of LANG determines the level at which auxiliary language packages are installed in addition to Python. For example, the LANG variable for Python 2.6 is "C". This means that Python 2.6 will install the packages that are required for a Unix-like system. Python 2.6 on Windows will not install these packages, but it will install other packages necessary for Windows support. Python 2.6 on Windows will only install Python libraries, but will not install platform independent libraries. The Python LANG variable can also be used to determine the kind of execution environment that the interpreter will use. For example, the LANG=C.UTF-8 environment variable is used to install the Python packages in a UTF-8 execution environment. The LANG=ja_JP.EUC-JP environment variable is used to install the Python packages in a Japanese execution environment. There are two possible values for LANG: C: The C language for UNIX-like systems. If the C library is not found in the directory named by the LANG variable, an attempt is made to find it in the directories named by the LC_ALL, LC_MESSAGES and LANG environment variables. The environment variable LC_MESSAGES is used if it is available and nonempty. The value of the LC_ALL variable is used as a last resort. CPAN: The CPAN (Comprehensive Perl Archive Network) is a package repository system. A CPAN module can be a tarball or a zip file. The value of the CPAN variable is used to install a CPAN module into the Python module directory. If the CPAN variable is not present, it means to look for modules on the Internet instead. The following table summarizes the values of the Python LANG environment variable for each language version. Language Distribution Description Development Python from CPAN C Python for C systems. Example
